(54) Title: DNA SEQUENCE CODING FOR A MAMMALIAN GLUCURONYL C5-EPIMERASE AND A PROCESS FOR ITS **PRODUCTION**

(57) Abstract

An isolated or recombinant DNA sequence coding for a mammalian, including human, glucuronyl C5-epimerase or a functional derivative thereof capable of converting D-glucuronic acid (GlcA) to L-iduronic acid (IdoA); a recombinant expression vector comprising such DNA sequence; a host cell transformed with such recombinant expression vector; a process for the manufacture of a glucuronyl C5-epimerase or functional derivative thereof capable of converting GlcA to IdoA, comprising cultivation of a cell-line transformed with such recombinant expression vector, and a glucuronyl C5-epimerase or functional derivative thereof prepared by such process.

| | Inventive step (IS) | Claims Claims | .1-7 | YES NO |
| | Industrial applicability (IA) | Claims Claims | 1-8 | YES NO |

2. Citations and explanations

The claimed invention relates to an isolated DNA sequence coding for a mammalian glucuronyl C5-epimerase which converts D-glucuronic acid to L-iduronic acid and a method of producing the enzyme by recombinant DNA-technique.

During the search the following documents were found:

- A) The Journal of Biological Chemistry, Patrick Cambell et al, "Biosynthesis of Heparin/Heparan Sulfate", page 26953-26958.
- B) WO 9614425

Document A relates to the purified bovine enzyme D-glucuronyl C-5 epimerase. The claimed enzyme has essentially the same characteristics as the known enzyme. However, this isolated enzyme was found to be a truncated form of the enzyme lacking 73 amino acids residues in the N-terminal. Among other residues one of the cysteine residues was missing. In spite of this it was found to be active.

No document, however, has been found relating to an isolated DNA sequence coding for the claimed enzyme or to produce the enzyme by recombinant DNA technique. It is considered inventive to deduce the DNA sequence from the amino acid sequence as the amino acid sequence was not completely known. The new knowledge of the whole amino acid sequence renders it possible to derive the DNA sequence and to produce the enzyme by recombinant DNA technique.

Therefore claims 1-7 are novel and are considered to involve an inventive step.

. . . / . . .

International application No.

PCT/SE98/00703

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: V

That the enzyme is produced by recombinant DNA technique does not automatically render the enzyme novel nor does it automatically give the enzyme an unexpected feature. In this case ,however, because of the fact that the whole amino acid sequence was not known before, the claimed enzyme is novel. Due to the expression "or a functional derivative thereof" of claim 8, this claim cannot, however, be considered to be novel, as this expression would include the enzyme known from document A.

Document B discloses the use of D-glycuronyl-Liduronyl-C5-epimerase enzyme to produce polysaccharides having a high iduronic acid content.

CLAIMS

- 1. An isolated or recombinant DNA sequence coding for a mammalian, including human, glucuronyl C5-epimerase, or a functional derivative of said DNA sequence, capable of converting D-glucuronic acid (GlcA) to L-iduronic acid (IdoA) constituted by a nucleotide sequence comprising nucleotide residues 1 to 1404, inclusive, as depicted in the sequence listing.
 - 2. A DNA sequence according to claim 1 constituted by a nucleotide residue comprising nucleotide residues 73 to 1404, inclusive, as depicted in the sequence listing.

: . .

15

- 3. A DNA sequence according to claim 2 constituted by a nucleotide residue comprising nucleotide residues 1 to 1404, inclusive, as depicted in the sequence listing.
- 4. A recombinant expression vector containing a transcription unit comprising a DNA sequence according to any one of the preceding claims, a transcriptional promoter, and a polyadenylation sequence.
- 5. A recombinant expression vector according to claim 4, characterized in that the vector is a Baculovirus.
 - 6. A host cell transformed with the recombinant expression vector of claim 4 or 5.
- 7. A process for the manufacture of a glucuronyl C5-epimerase or a functional derivative thereof capable of converting D-glucuronic acid (GlcA) to L-iduronic acid (IdoA), comprising cultivation of a host cell transformed with a recombinant expression vector according to claim 4 or 5 in a nutrient medium allowing expression and secretion

21

25 -05- 1999

of said epimerase or functional derivative thereof.

8. A glucuronyl C5-epimerase or a functional defrivative thereof whenever prepared by the process of claim 7. 5

20

CLAIMS

- 1. An isolated or recombinant DNA sequence coding for a mammalian, including human, glucuronyl C5-epimerase or a functional derivative thereof capable of converting D-glucuronic acid (GlcA) to L-iduronic acid (IdoA).
- 2. A DNA sequence according to claim 1 constituted by a nucleotide sequence comprising nucleotide residues 1 to 1404, inclusive, as depicted in the sequence listing.
- 3. A DNA sequence according to claim 2 constituted 10 by a nucleotide residue comprising nucleotide residues 73 to 1404, inclusive, as depicted in the sequence listing.
 - 4. A DNA sequence according to claim 2 constituted by a nucleotide residue comprising nucleotide residues 1 to 1404, inclusive, as depicted in the sequence listing.
- 5. A recombinant expression vector containing a transcription unit comprising a DNA sequence according to any one of the preceding claims, a transcriptional promoter, and a polyadenylation sequence.
 - 6. A host cell transformed with the recombinant expression vector of claim 5.
- 7. A process for the manufacture of a glucuronyl C5-epimerase or a functional derivative thereof capable of converting D-glucuronic acid (GlcA) to L-iduronic acid (IdoA), comprising cultivation of a cell line transformed with a recombinant expression vector according to claim 5 in a nutrient medium allowing expression and secretion of said epimerase or functional derivative thereof.
 - 8. A glucuronyl C5-epimerase or a functional derivative thereof whenever prepared by the process of claim 7.

| V. | Resoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; |
|----|---|
| | citations and explanations supporting such statement |

1. Statement

| Novelty (N) | Claims Claims | 1-7 | YES NO |
|-------------------------------|------------------|-----|--------|
| Inventive step (IS) | Claims Claims | 1-7 | YES NO |
| Industrial applicability (IA) | Claims Claims | 1-8 | YES NO |

2. Citations and explanations

The claimed invention relates to an isolated DNA sequence coding for a mammalian glucuronyl C5-epimerase which converts D-glucuronic acid to L-iduronic acid and a method of producing the enzyme by recombinant DNA-technique.

During the search the following documents were found:

- A) The Journal of Biological Chemistry, Patrick Cambell et al, "Biosynthesis of Heparin/Heparan Sulfate", page 26953-26958.
- B) WO 9614425

Document A relates to the purified bovine enzyme D-glucuronyl C-5 epimerase. The claimed enzyme has essentially the same characteristics as the known enzyme. However, this isolated enzyme was found to be a truncated form of the enzyme lacking 73 amino acids residues in the N-terminal. Among other residues one of the cysteine residues was missing. In spite of this it was found to be active.

No document, however, has been found relating to an isolated DNA sequence coding for the claimed enzyme or to produce the enzyme by recombinant DNA technique. It is considered inventive to deduce the DNA sequence from the amino acid sequence as the amino acid sequence was not completely known. The new knowledge of the whole amino acid sequence renders it possible to derive the DNA sequence and to produce the enzyme by recombinant DNA technique.

Therefore claims 1-7 are novel and are considered to involve an inventive step.

PCT/SE98/00703

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: V

That the enzyme is produced by recombinant DNA technique does not automatically render the enzyme novel nor does it automatically give the enzyme an unexpected feature. In this case ,however, because of the fact that the whole amino acid sequence was not known before, the claimed enzyme is novel. Due to the expression "or a functional derivative thereof" of claim 8, this claim cannot, however, be considered to be novel, as this expression would include the enzyme known from document A.

Document B discloses the use of D-glycuronyl-Liduronyl-C5-epimerase enzyme to produce polysaccharides having a high iduronic acid content.

In the Claims:

Please cancel claims 22-24, 26-32, 36, 37, 44-46, 48-54, 58, 59, 66, 69-71, and 86-102 without prejudice.

Also, please cancel non-elected claims 8, 19 and 20.

Please substitute the following claims 21, 43, 65, 79 and 80 for the pending claims 21, 43, 65, 79 and 80:

- 21. (Twice amended) An isolated polynucleotide comprising a nucleotide sequence encoding a glucuronyl C5-epimerase capable of converting D-glucuronic acid to L-iduronic acid, the amino acid sequence of which is at least 95% identical to a reference amino acid sequence selected from the group consisting of:
 - (a) amino acids 25 to 444 of SEQ ID NO: 13 and
 - (b) amino acids 1 to 444 of SEQ ID NO: 13.
- 25. The polynucleotide of claim 21 encoding a polypeptide comprising amino acid residues 1-444 of SEQ ID NO: 13.
 - 33. The polynucleotide of claim 21 which is DNA.
 - 34. The polynucleotide of claim 21 which is RNA.
- 35. The polynucleotide of claim 21, wherein said polynucleotide encodes a polypeptide which is a fusion protein.
 - 38. (Once amended) A vector comprising the polynucleotide of claim 21.
 - 39. The vector of claim 38, wherein said vector comprises a transcription unit.
 - 40.(Once amended) A host cell comprising the polynucleotide of claim 21.
- 41. The host cell of claim 40, selected from the group consisting of Sf9 cells, *E. coli*, 293 human embryonic kidney cells, COS-1 cells and CHO cells.
- 42. A method of producing a protein that comprises culturing the host cell of claim 40 under conditions such that said protein is expressed, and recovering said protein.

Cont

- 43. (Thrice amended) An isolated polynucleotide encoding a glucuronyl C5-epimerase capable of converting D-glucuronic acid to L-iduronic acid and which hybridizes under the conditions of incubation at 65° C in a solution comprising: 6x SSC, 5x Denhardt's solution containing 0.1% SDS and 0.1 mg/ml denatured salmon sperm DNA, followed by washing in 2x SSC and 0.5% SDS at 42° C, to a polynucleotide encoding a polypeptide selected from the group consisting of:
 - (a) amino acids 25 to 444 of SEQ ID NO: 13 and
 - (b) amino acids 1 to 444 of SEQ ID NO: 13.
- 47. The polynucleotide of claim 43 encoding a polypeptide comprising amino acid residues 1-444 of SEQ ID NO: 13.
 - 55. The polynucleotide of claim 43 which is DNA.
 - 56. The polynucleotide of claim 43 which is RNA.
- 57. The polynucleotide of claim 43, wherein said polynucleotide encodes a polypeptide which is a fusion protein.
 - 60.(Once amended) A vector comprising the polynucleotide of claim 43.
 - 61. The vector of claim 60, wherein said vector comprises a transcription unit.
 - 62.(Once amended) A host cell comprising the polynucleotide of claim 43.
- 63. The host cell of claim 62, selected from the group consisting of Sf9 cells, *E. coli*, 293 human embryonic kidney cells, COS-1 cells and CHO cells.
- 64. A method of producing a protein that comprises culturing the host cell of claim 62 under conditions such that said protein is expressed, and recovering said protein.
- 65. (Thrice amended) An isolated polynucleotide, or an isolated complementary-polynucleotide, which encodes a polypeptide having glucuronyl C5-epimerase activity and capable of converting D-glucuronic acid to L-iduronic acid, and which hybridizes under the conditions of incubation at 65° C in a solution comprising: 6x SSC, 5x Denhardt's solution containing 0.1% SDS and 0.1 mg/ml denatured salmon sperm DNA, followed by washing in 2x SSC and 0.5% SDS at 42° C, to said isolated polynucleotide selected from the group consisting of:

- (a) nucleotides 73 to 1404 of SEQ ID NO: 12;
- (b) nucleotides 73 to 3085 of SEQ ID NO: 12;
- (c) nucleotides 145 to 1404 of SEQ ID NO: 12;
- (d) nucleotides 145 to 3085 of SEQ ID NO: 12;
- (e) nucleotides 1 to 1404 of SEQ ID NO: 12 and
- (f) nucleotides 1 to 3085 of SEQ ID NO: 12.
- 67. The isolated polynucleotide of claim 65 comprising nucleotides 73 to 1404 of SEQ ID NO: 12, or said isolated complementary polynucleotide that hybridizes to the same.
- 68. The isolated polynucleotide of claim 65 comprising nucleotides 73 to 3085 of SEQ ID NO: 12, or said isolated complementary polynucleotide that hybridizes to the same.
 - 72. The isolated polynucleotide of claim 65 comprising nucleotides 145 to 1404 of SEQ ID NO: 12, or said isolated complementary polynucleotide that hybridizes to the same.
- 73. The isolated polynucleotide of claim 65 comprising nucleotides 145 to 3085 of SEQ ID NO: 12, or said isolated complementary polynucleotide that hybridizes to the same.
- 74. The isolated polynucleotide of claim 65 comprising nucleotides 1 to 1404 of SEQ ID NO: 12, or said isolated complementary polynucleotide that hybridizes to the same.
- 75. The isolated polynucleotide of claim 65 comprising nucleotides 1 to 3085 of SEQ ID NO: 12, or said isolated complementary polynucleotide that hybridizes to the same.
 - 76. The polynucleotide of claim 65 which is DNA.
 - 77. The polynucleotide of claim 65 which is RNA.
- 78. The polynucleotide of claim 65, wherein said polynucleotide encodes a polypeptide which is a fusion protein.
- 79. (Twice amended) The polynucleotide of claim 65, wherein said polynucleotide sequence is selected from a member of the group consisting of
 - (a) nucleotides 73 to 1404 of SEQ ID NO: 12;
 - (b) nucleotides 73 to 3085 of SEQ ID NO: 12;
 - (c) nucleotides 145 to 1404 of SEQ ID NO: 12;

b6 Kn

- (d) nucleotides 145 to 3085 of SEQ ID NO: 12;
- (e) nucleotides 1 to 1404 of SEQ ID NO: 12 and
- (f) nucleotides 1 to 3085 of SEQ ID NO: 12;

and wherein said polynucleotide encodes a fusion protein.

- 80. (Thrice amended) Polynucleotide which encodes an amino acid sequence which has a deletion of the N-terminal, C-terminal or internal regions of the amino acid sequence encoded by the polynucleotide of claim 65, and wherein said polynucleotide sequence is selected from a member of the group consisting of
 - (a) nucleotides 73 to 1404 of SEQ ID NO: 12;
 - (b) nucleotides 73 to 3085 of SEQ ID NO: 12;
 - (c) nucleotides 145 to 1404 of SEQ ID NO: 12;
 - (d) nucleotides 145 to 3085 of SEQ ID NO: 12;
 - (e) nucleotides 1 to 1404 of SEQ ID NO: 12 and
 - (f) nucleotides 1 to 3085 of SEQ ID NO: 12.
 - 81 (Once amended) A vector comprising the polynucleotide of claim 65.
 - 82. The vector of claim 81, wherein said vector comprises a transcription unit.
 - 83. (Once amended) A host cell comprising the polynucleotide of claim 65.
- 84. The host cell of claim 83, selected from the group consisting of Sf9 cells, *E. coli*, 293 human embryonic kidney cells, COS-1 cells and CHO cells.
- 85. A method of producing a protein that comprises culturing the host cell of claim 83 under conditions such that said protein is expressed, and recovering said protein.
- 103.(New) An isolated polynucleotide comprising a nucleotide sequence encoding a polypeptide, comprising amino acid residues 1-444 of SEQ ID NO: 13.

194.(New) The polynucleotide of claim 103 which is DNA.

105.(New) The polynucleotide of claim 103 which is RNA.

106.(New) The polynucleotide of claim 103, wherein said polynucleotide encodes a polypeptide which is a fusion protein.

107.(once amended) A polynucleotide which encodes an amino acid sequence which has a deletion of the N-terminal, C-terminal or internal regions of the amino acid sequence encoded by the polynucleotide of claim 103 and having glucuronyl C5-epimerase activity and capable of converting D-glucuronic acid to L-iduronic acid.

108.(New) A vector comprising the polynucleotide of claim 103.

109.(New) The vector of claim 108, wherein said vector comprises a transcription unit.

110.(New) A host cell comprising the polynucleotide of claim 103.

111.(New) The host cell of claim 110, selected from the group consisting of Sf9 cells, *E. coli*, 293 human embryonic kidney cells, COS-1 cells and CHO cells.

112.(New) A method of producing a protein that comprises culturing the host cell of claim 110 under conditions such that said protein is expressed, and recovering said protein.

114. An isolated polynucleotide comprising a nucleotide sequence encoding a polypeptide, comprising amino acids 25 to 444 of SEQ ID NO: 13.

115. An isolated polynucleotide, or an isolated complementary polynucleotide, comprising nucleotides 73 to 3085 of SEQ ID NO: 12.
